

Viral Decontamination Services

Biocide Fogging

*Eliminate bacteria & viral pathogens in your workplace
with our Biocide Fogging Services.*

Protect your business after lockdown with our biocide fogging services. Using current guidance from Public Health England we are able to provide a specialist sanitisation service for all industrial and commercial premises (indoor spaces only). Utilising our existing investment in the best PPE / RPE, coupled with our impeccable high standards of operational health and safety, we can treat most indoor spaces within a day. Creation are fully insured and compliant with all mandatory health and safety legislation to carry out biocide fogging. Suitable for EN14476 chemicals as approved by Public Health England, bio-fogging is an extremely effective sterilisation method, known to kill all enveloped viruses (like COVID-19). Where required, we can provide ATP testing* (a recognised test for the presence of microbial activity). This will provide a measure of microbial activity before and after decontamination, which is a marker of the disinfectant activity. This does not test for viral pathogens.
